1 Product Brief

The BFP720F is a very low noise wideband NPN bipolar RF transistor. The device is based on Infineon's reliable high volume silicon germanium carbon (SiGe:C) heterojunction bipolar technology. The collector design supports voltages up to $V_{CEO} = 4.0$ V and currents up to $I_C = 25$ mA. The device is especially suited for mobile applications in which low power consumption is a key requirement. The typical transition frequency is approximately 45 GHz, hence the device offers high power gain at frequencies up to 12 GHz in amplifier applications. The device is housed in a thin small flat plastic package with visible leads.

2 Features

- High performance general purpose wideband LNA transistor
- Operation voltage: 1.0 V to 4.0 V
- Transistor geometry optimized for low current applications
- 26.5 dB maximum stable gain at 1.9 GHz and only 13 mA
- 15 dB maximum available gain at 10 GHz and only 13 mA
- 0.7 dB minimum noise figure at 5.5 GHz and 1.0 dB at 10 GHz
- High linearity $OP_{1dB} = 7 \text{ dBm}$ and $OIP_3 = 21 \text{ dBm}$ at 5.5 GHz and low current consumption of 13 mA
- Thin small flat Pb-free (RoHS compliant) and halogen-free package with visible leads
- Qualification report according to AEC-Q101 available

Applications

FM Radio, Mobile TV, RKE, AMR, Cellular, ZigBee, GPS, WiMAX, SDARs, Satellite Radio, Bluetooth, WiFi, Cordless phone, UMTS, WLAN, UWB, LNB

Attention: ESD (Electrostatic discharge) sensitive device, observe handling precautions

1) T_S is the soldering point temperature. T_S is measured on the emitter lead at the soldering point to the pcb

Attention: Stresses above the max. values listed here may cause permanent damage to the device.

Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Maximum ratings are absolute ratings; exceeding only one of these values may cause irreversible damage to the integrated circuit.

Notes

- $G_{ms} = IS_{21} / S_{12}I$ for $k < 1$; $G_{ma} = IS_{21} / S_{12}I(k^2 - 1)^{1/2}$ for $k > 1$
- In order to get the NF_{min} values stated in this chapter the test fixture losses have been subtracted from all measured results

Note: The curves shown in this chapter have been generated using typical devices but shall not be considered as a guarantee that all devices have identical characteristic curves.

6 Simulation Data

For the SPICE Gummel Poon (GP) model as well as for the S-parameters (including noise parameters) please refer to our internet website: www.infineon.com/rf.models. Please consult our website and download the latest versions before actually starting your design.

You find the BFP720F SPICE GP model in the internet in MWO- and ADS-format, which you can import into these circuit simulation tools very quickly and conveniently. The model already contains the package parasitic and is ready to use for DC- and high frequency simulations. The terminals of the model circuit correspond to the pin configuration of the device.

The model parameters have been extracted and verified up to 15 GHz using typical devices. The BFP720F SPICE GP model reflects the typical DC- and RF-performance within the limitations which are given by the SPICE GP model itself.
